

# Automating RCA in OVS/OVN-Based Deployments Using AI/ML

Gurpreet Singh

Principal Product Manager (Red Hat)

# Point of observations (topology view)

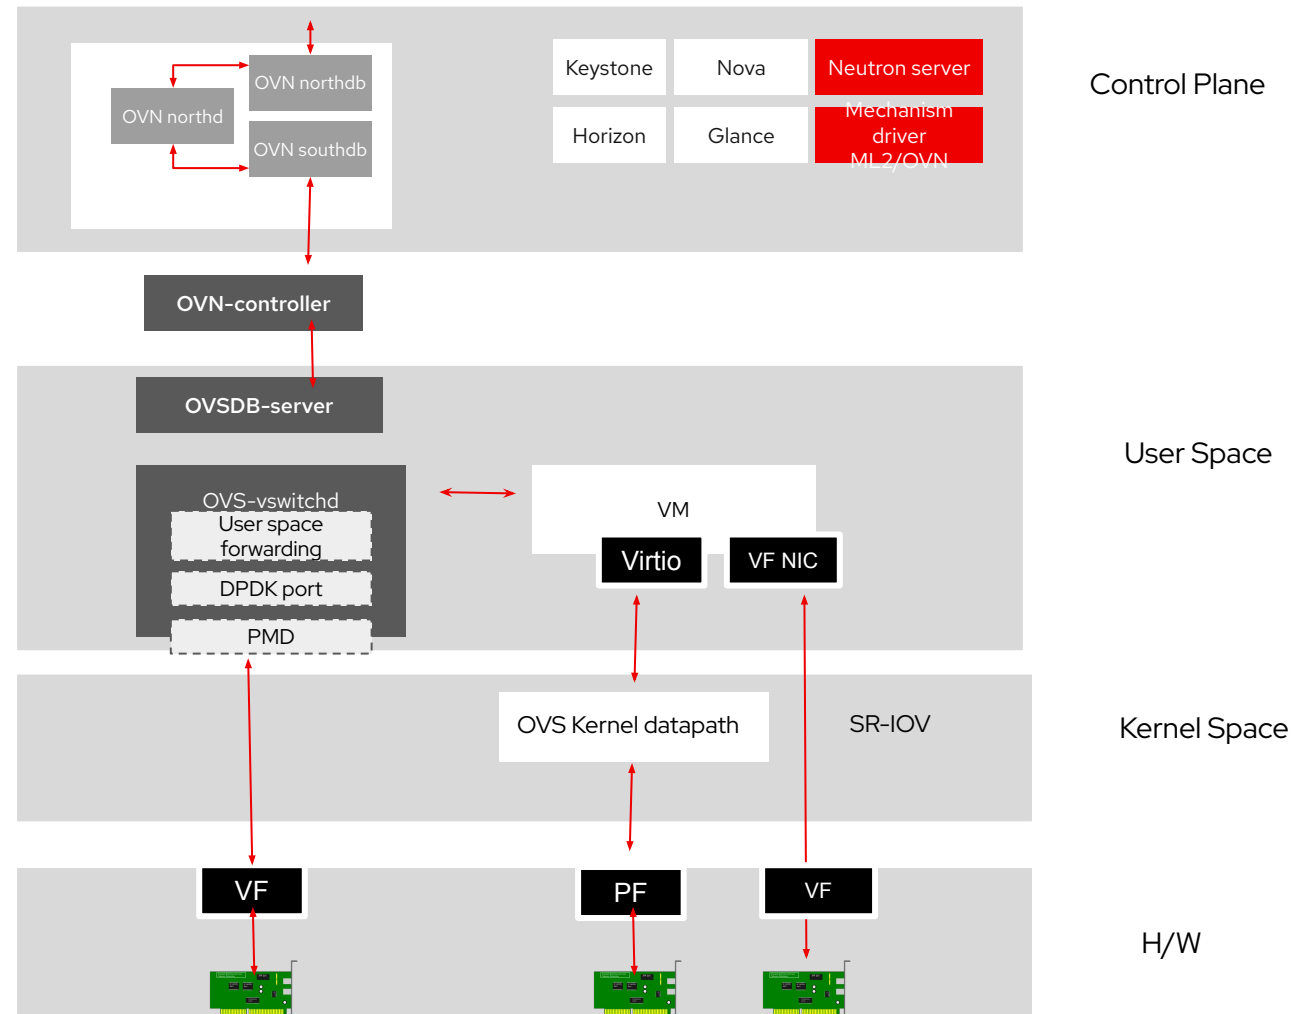

# Network Observability Metrics

## Metrics / KPIs

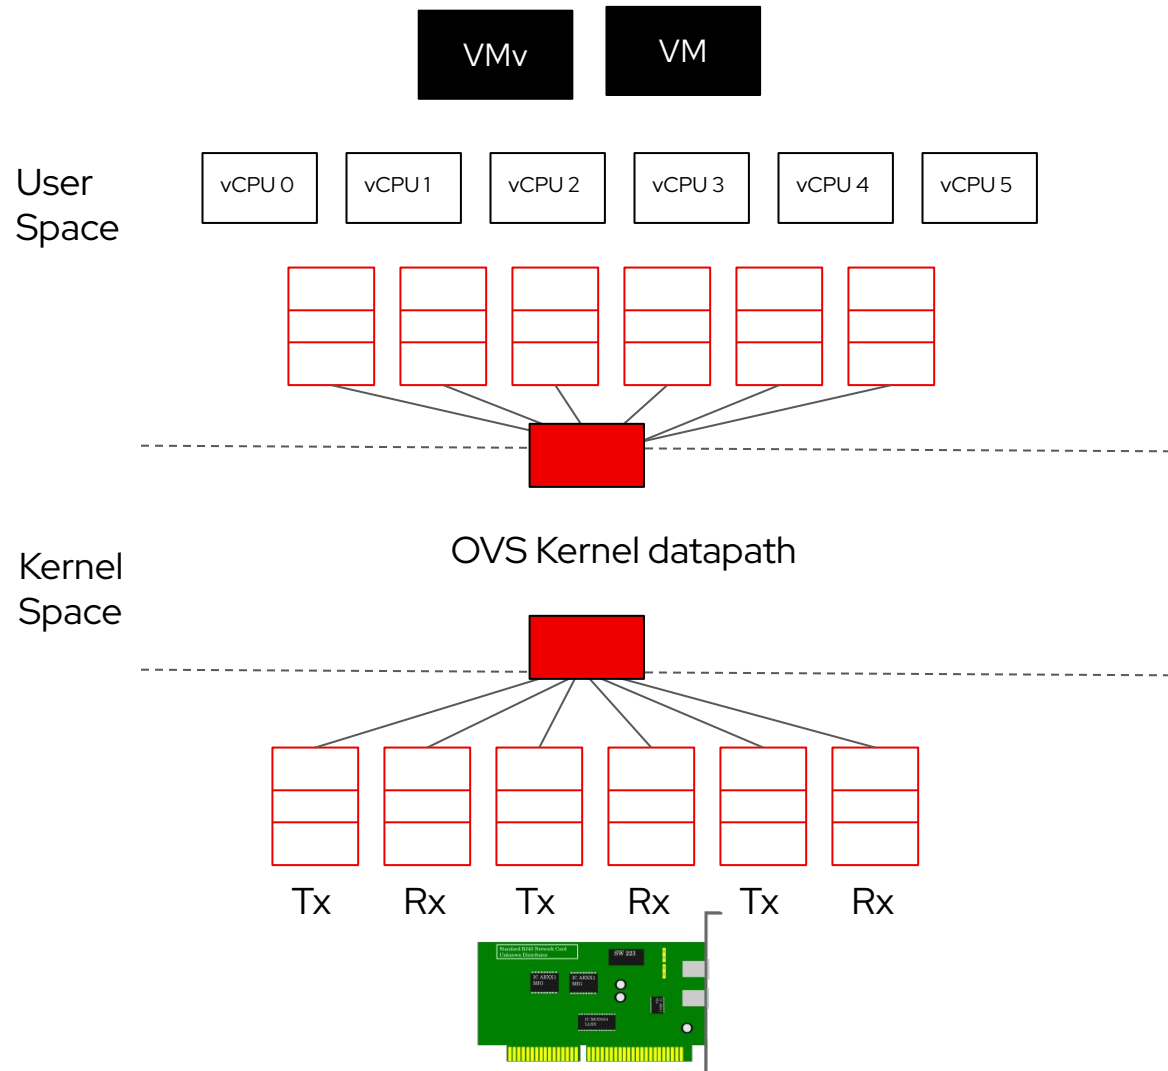

- ▶ Control plane
  - OVN DB
- ▶ Data Plane
  - OVS, OVN (interface/port level metrics)
  - OVS-DPDK
  - System metrics
  - Resource Utilization

## Root Cause / Point of Contention

- ▶ NIC, OVS/OVN
- ▶ Buffer oversubscription, queue lengths
- ▶ CPU & Memory allocation

# Fine Tuning Performance

- ▶ vCPU core, memory allocation
  - Resource Optimization
  - Performance isolation
    - CPU Partitioning
    - Isolcpus
- ▶ Non-voluntary cpu context switches on OVS PMD and QEMU vCPU threads
- ▶ IRQ balance
- ▶ vCPU to queue mapping
  - Hashing or 1:1
- ▶ Tx/Rx queue length
- ▶ Throughput / Latency trade-off
- ▶ Acceleration technologies

# Traditional Root Cause Analysis

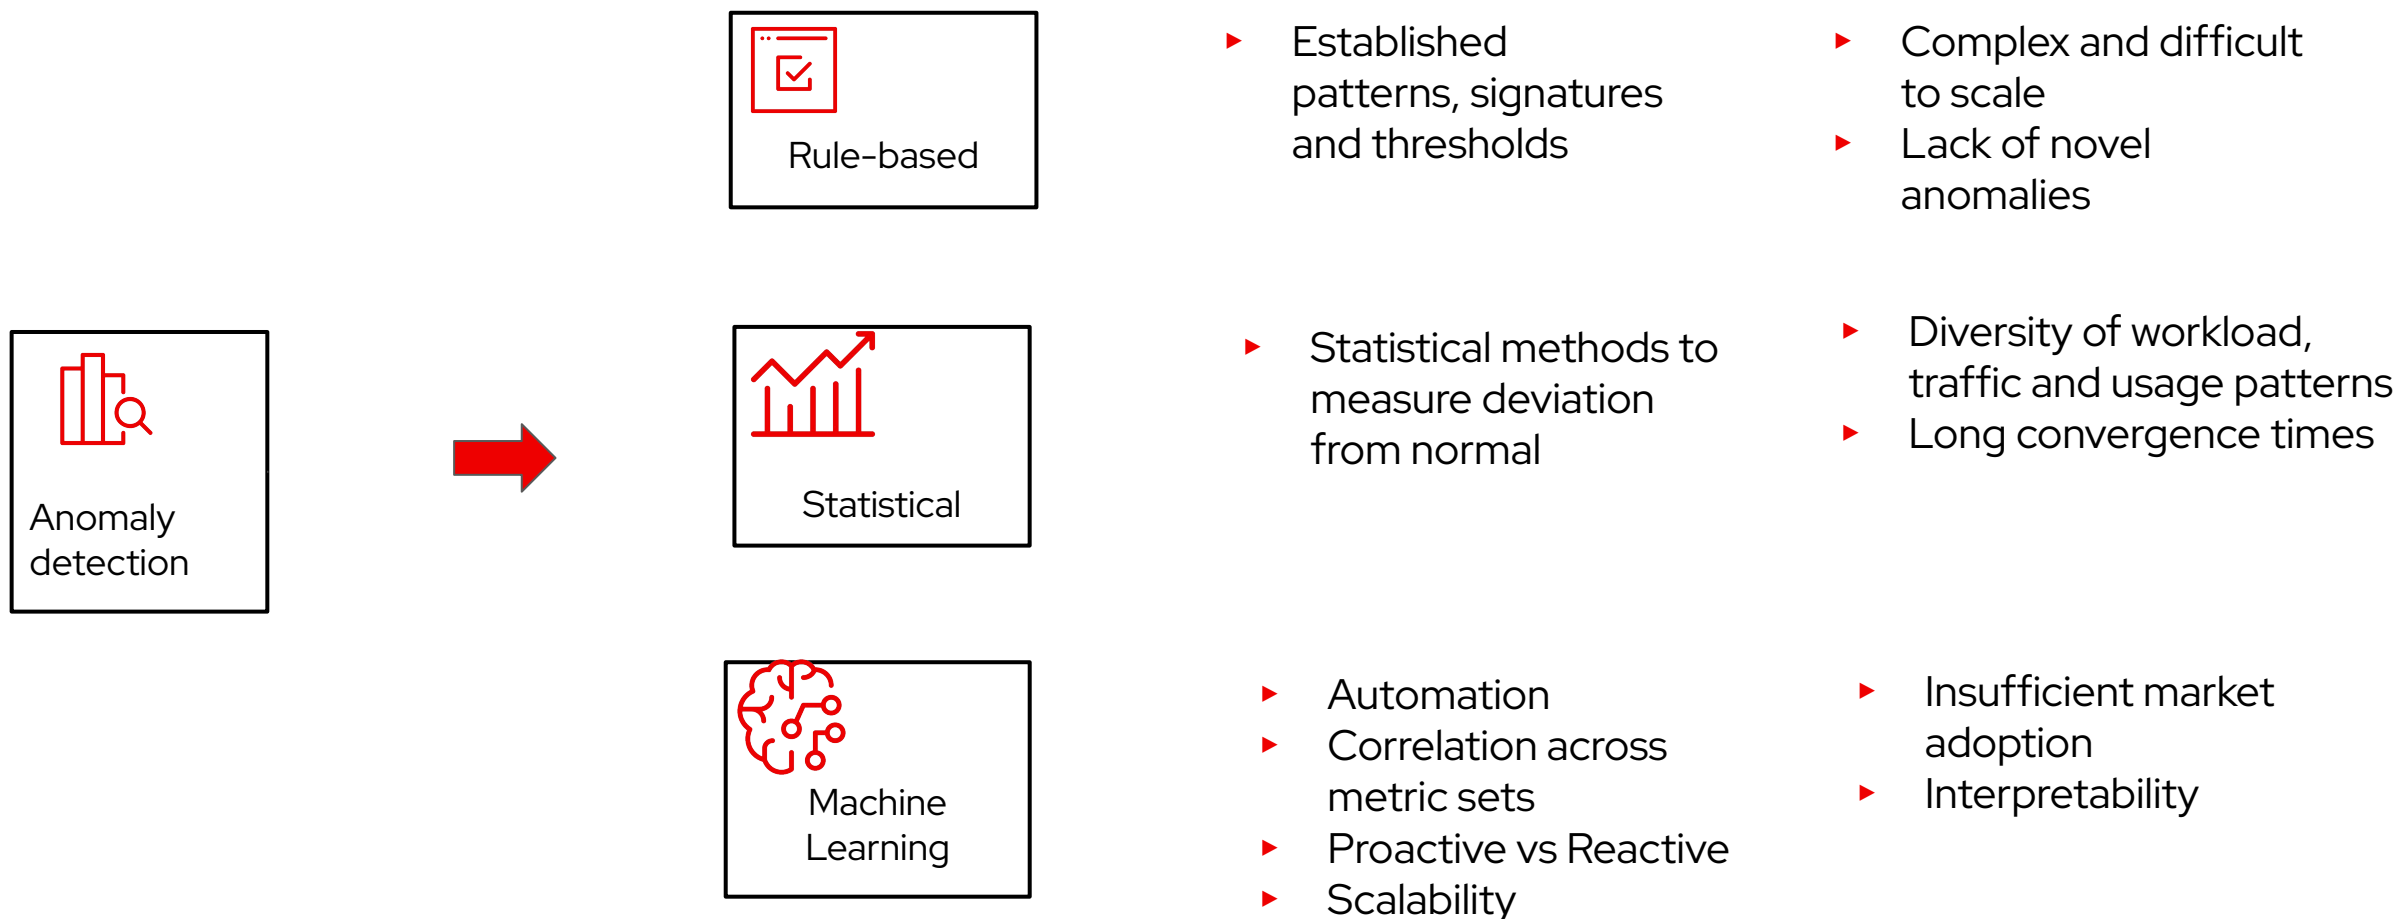

- ▶ Largely manual with reliance on monitoring dashboards
- ▶ Multiple entities and iterations
- ▶ Sometimes can take weeks or months to resolve
- ▶ Reactive approach impacting SLAs and service quality

Overprovision capacity significantly

# Anomaly Detection

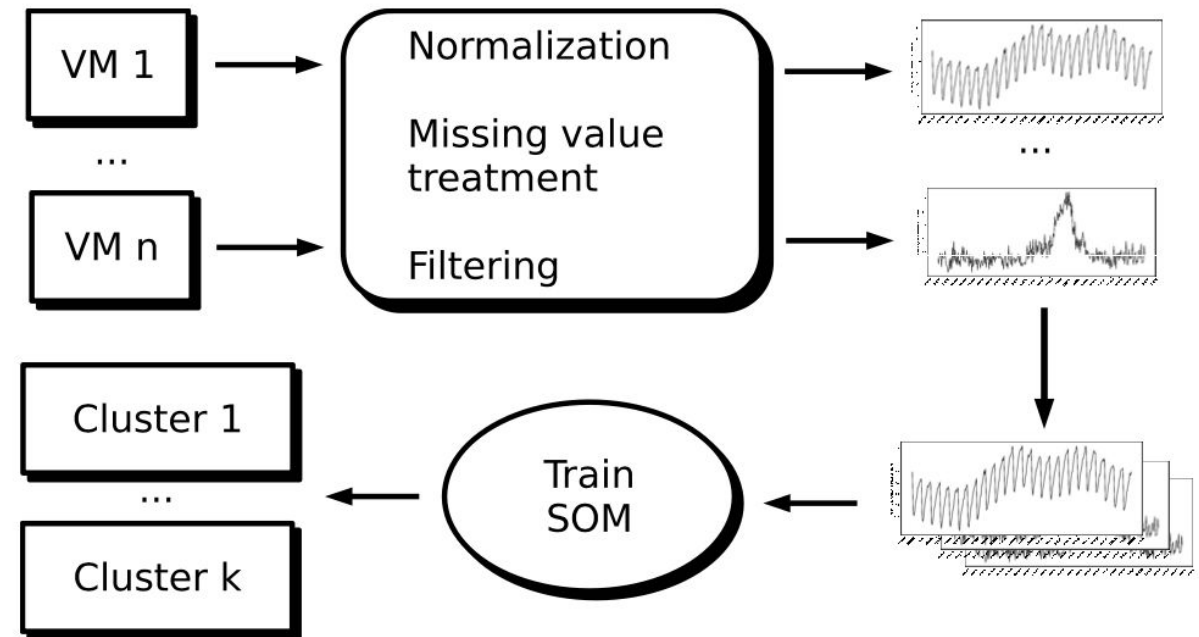

# Self Organizing Maps (SOM) based approach

- ▶ Joint analysis of infrastructure resource utilization (infra metrics) & application performance metrics (VNF metrics)
- ▶ Real data from DC
- ▶ Somoclu open source SOM implementation
- ▶ 99% accuracy

## Challenges

- ▶ High processing time, large data sets
- ▶ Scale challenges

SOM-based behavioral analysis for virtualized network functions. In Proceedings of the 35th Annual ACM Symposium on Applied Computing (SAC '20). Association for Computing Machinery, New York, NY, USA, 1204-1206. <https://doi.org/10.1145/3341105.3374110>

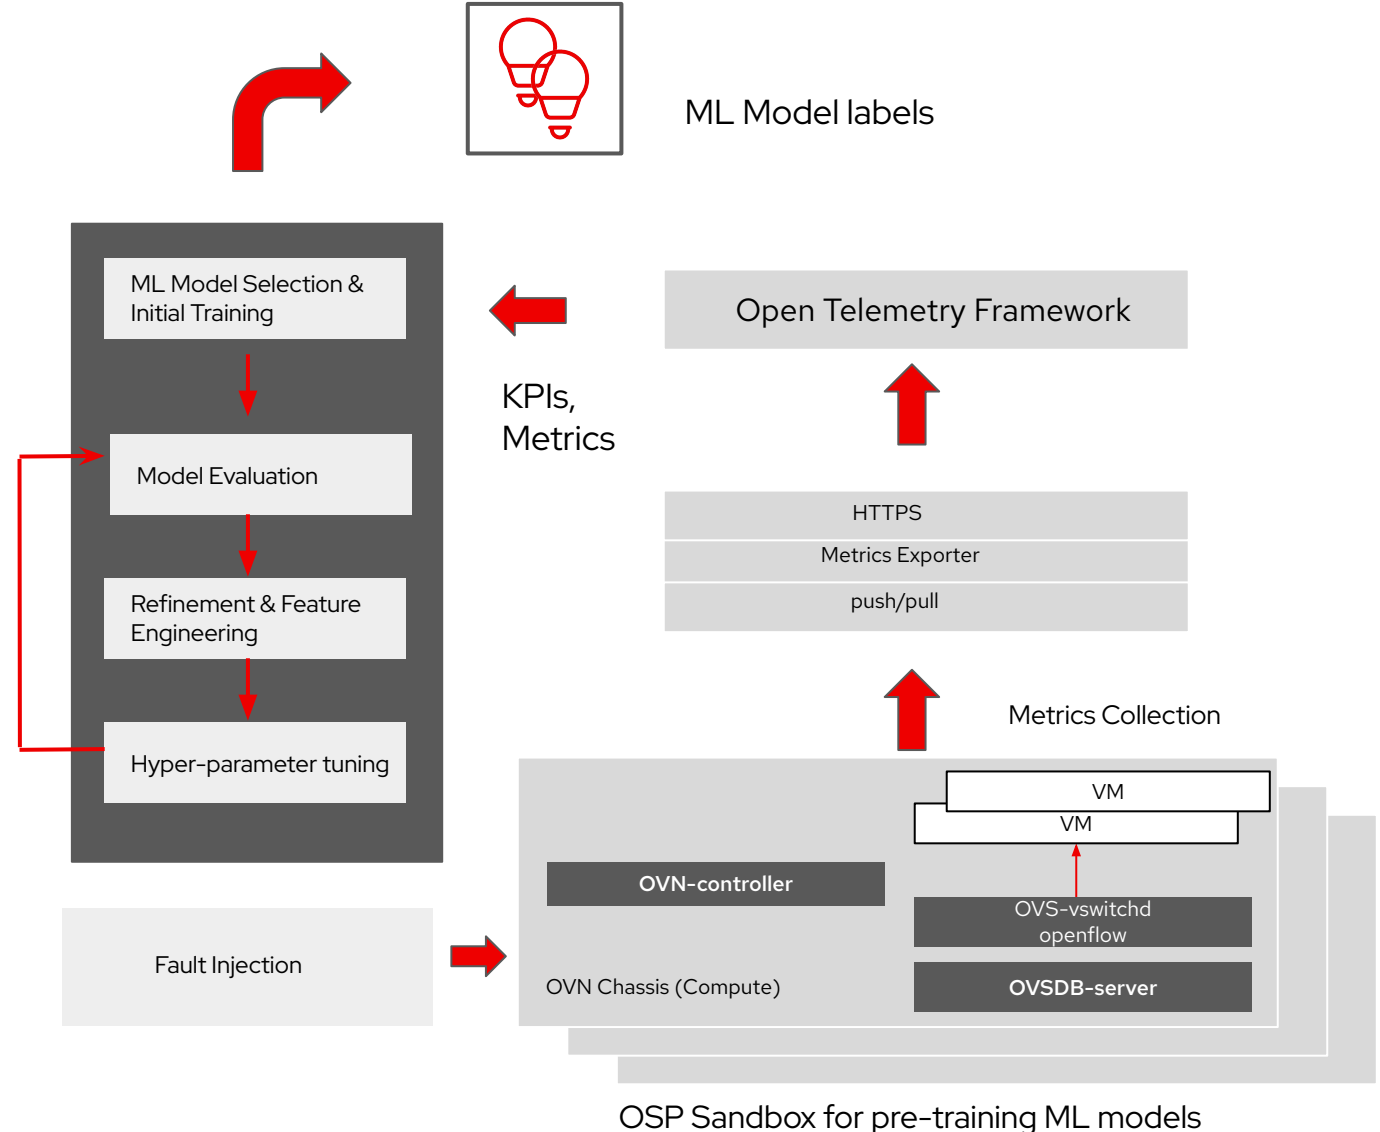

# Model Training

## Simulated environment

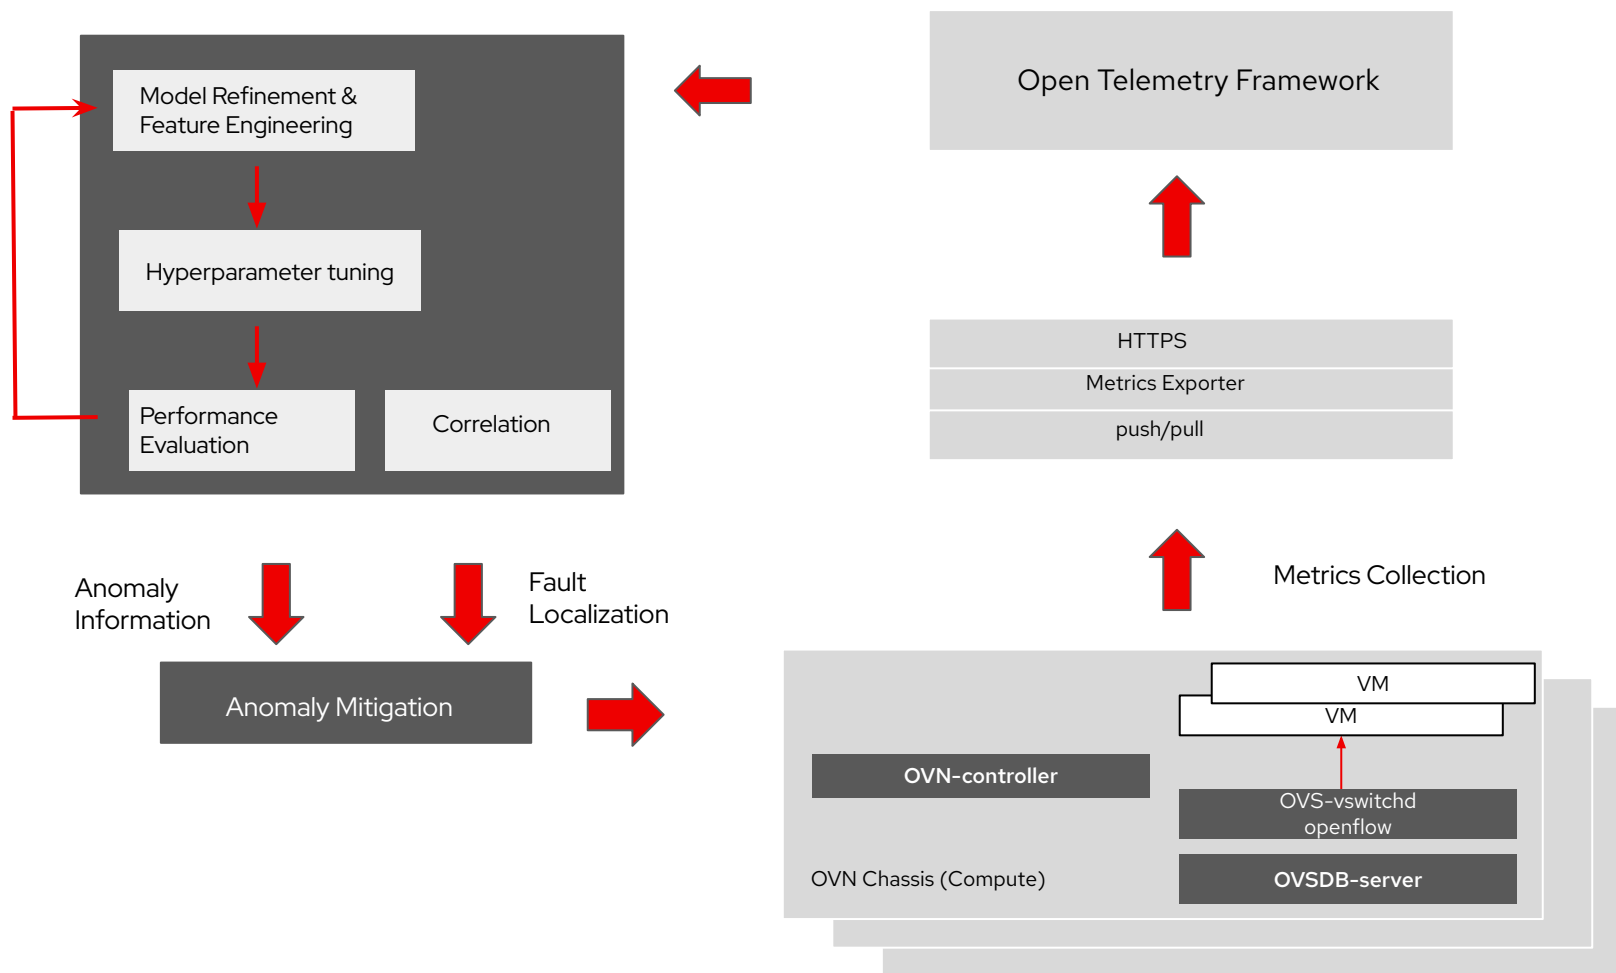

- Simulate workload to mimic real-world scenarios
- Replicate resource allocation and configuration

## Fault Injection

- CPU stress
- Network stress (delay)
- Memory stress
- Tx/Rx queue oversubscription
- Limit to service degradation and not service outage

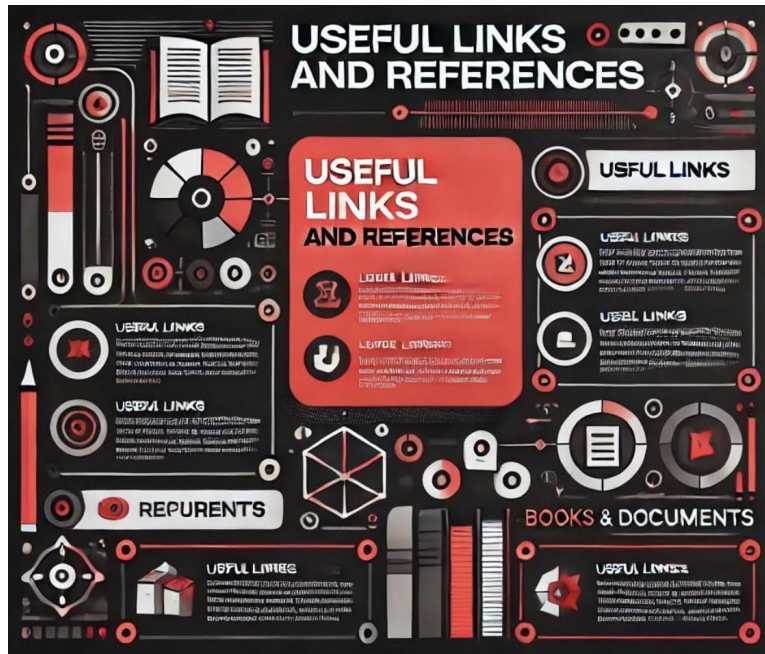

# Closed Loop Automation

- ▶ Standardized observability framework such as OpenTelemetry
- ▶ Open-source tools, sandbox that enables fault injection in simulated environments for training AI/ML models for fault/anomaly detection
- ▶ Open-source test VNFs to enable VNF centric telemetry data collection and test anomaly mitigation
