NAME

ovs-parse-backtrace − parses ovs-appctl backtrace output

SYNOPSIS

ovs−appctl backtrace | ovs−parse−backtrace [<binary>]

ovs−parse−backtrace [<binary>] < <backtrace>

DESCRIPTION

In some configurations, many Open vSwitch daemons can produce a series of backtraces using the **ovs−appctl backtrace** command. Users can analyze these backtraces to figure out what the given Open vSwitch daemon may be spending most of its time doing. **ovs−parse−backtrace** makes this output easier to interpret.

The **ovs−appctl backtrace** output must be supplied on standard input. The binary that produced the output should be supplied as the sole non−option argument. For best results, the binary should have debug symbols.

OPTIONS

- **−−help**

  Prints a usage message and exits.

- **−−version**

  Prints the version and exits.
